Analysing Your Field

We're gathering and analysing data from multiple sources

Field analysis

Analysing your field

Reviewing environmental information and comparing possible crop rotation strategies.

- ✓ Reviewing field information
- ✓ Checking environmental data
- ✓ Applying farmer priorities and limits
- ✓ Preparing rotation options

Three Options

Your current rotation and two alternative strategies

Current Rotation

Reference

Your current practice for this field.

Season 1

—

↓

Season 2

—

↓

Season 3

—

- ✔ Soil health —
- ✔ Water use —
- ✔ Erosion risk —

View Details

Option A

Alternative rotation

Alternative rotation based on your priorities.

Season 1

—

↓

Season 2

—

↓

Season 3

—

- ✔ Soil health —
- ✔ Water use —
- ✔ Erosion risk —

View Details

Option B

Alternative rotation

Alternative rotation based on your priorities.

Season 1

—

↓

Season 2

—

↓

Season 3

—

- ✔ Soil health —
- ✔ Water use —
- ✔ Erosion risk —

Strategic Comparison

Criteria	Current	Option A	Option B
Soil Health	Good	Very Good	Good
Water Use	Moderate	Moderate	Low
Nitrogen Control	Low	Low	Very Low
Erosion Risk	Low	Low	Low
Labour Fit	Moderate	High	Moderate
Income Potential	Good	Very Good	Good

Trade-off View

Our Recommendation

Option A offers the best balance for your priorities, especially if you want to improve soil health while keeping water use moderate.
